

Known for its characteristics of excellent resistance to atmospheric corrosion, good strength and excellent machinability, alloy C353 has been the essential leaded Yellow Brass of choice for years. Also known as "clock brass" because of its use in clock and watch parts this alloy has found wide use in applications such as meter plates, gears, key stock and bearings. In addition to offering excellent machinability rating, alloy C353 also offers outstanding wear resistance for moving parts that are subject to frictional forces.
